PRECAUTIONS

1. Recommend to use a regulated DC 12V power supply unit with camera for best picture and for safe operation of the unit.
Unregulated DC 12V power supply usually provides around 10V~14V after loaded and can cause damage on the camera.
2. Recommend to use the camera with the monitor which has the standard video input impedance level of 75Ω . If in any case your monitor is set to high impedance mode, please switch the monitor standard impedance position. If the monitor does not have the impedance adjust switch, please ask us for a camera suitable for your monitor.
3. Do not attempt to disassemble the camera.
There are no user serviceable parts inside.
4. Never face the camera toward the sun.
It may cause a smear on the picture when the camera is directly faced to the sun or spot lights or lights reflecting objects.
5. Do not expose the camera to rain or moisture, or do not try to operate the camera in wet area. Moisture can damage the camera and can create the danger of electric shock.
